Art Unit: 1714

The amendments of 6/24/04 have been entered. Claims 1-34 are pending.

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. No. 5356951 Yearn et al. in view of WO 00/61073 blackwell et al., DE 3502594 A1 Michl et al., US Pat. No. 4503169 Randkley, and US Pat. No. 4668712 Hino et al..

Yearn et al. discloses particulate composite filler of mean particle size of 5-50 micrometers (column 4, lines 21-24) and tooth filling material containing monomer and the composite filler. Yearn et al. does not disclose the instantly claimed restriction on amount of particles with a size less than 10 micrometers. See column 2, lines 25-41; column 3, lines 40-68; column 4, lines 1-2 and 11-68; column 5, lines 6-9; and the remainder of the document. The examples use the instantly claimed amount of polymerization initiator, which amounts are those commonly employed in polymerization of unsaturated monomers.

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed particle size limitations of claims 1, 2, and 10 because Blackwell et al. discloses the benefits of using such size ratios (page 3, line 21 to page 4, line 26) and these benefits resulting from the particle size limitations of Blackwell would have been expected in the compositions of Yearn.

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the ytterbium fluoride of the instant claim 8 and 18 because Yearn desires the

Art Unit: 1714

use of roentgenographic compounds in their compositions and Michl et al. shows ytterbium fluoride to be a particularly useful roentgenographic compound for use in filllings and its properties would have been expected in the composition of Yearn.

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed precipitated mixed oxides of the instant claims 9 and 22-25 because Yearn teaches that any glass powders can be used at column 3, lines 44-68 and column 4, lines 11-12 and 21-32 and such precipitated mixed oxides would have been expected to give their known properties, as taught by Randklev, to the composition of Yearn, who teaches that known additives may be used.

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the layered silicates, i.e. bentonite clays, of the instant claims in the composition of Yearn because they would have been expected to give their known properties, as taught by Hino et al., to the composition of Yearn, who teaches that known additives may be used.

The applicant's arguments are not persuasive for the reasons stated above and because there is no showing of any alleged unexpected results in a manner commensurate in scope with the instant claims and the cited prior art.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1714

Page 4

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick D. Niland whose telephone number is 571-272-1121. The examiner can normally be reached on Monday to Thursday from 10 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on 571-272-1119. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
